HOW TO USE CODLING MOTH MULTI COMPONENT LURE

The Codling Moth Female/Male lure comprised of 2 part: 1) a grey septum that contains Codlemone and Pear Ester sealed in a clear pouch, and 2) a coaster saturated with acetic acid sealed in a membrane packet.

DO NOT PUNCTURE the sealed pouch that contains the coaster lure. DO NOT REMOVE the large round coaster lure from the pouch. The clear layer is a slow release material that allows the scent to gradually escape into the air. Place the activated coaster lure either under the sticky liner of plastic delta trap or hang it under the roof of other trap designs.

Remove the septum lure from the pouch and place it sideways in the center of sticky liner.
