Remove release paper from both
velcro tape mounts

Place trap on bottom of container door, open the trap lid and adhere it to the wall or partially on the wall and on the floor.

Remove protective paper from trap surface and install two AA batteries

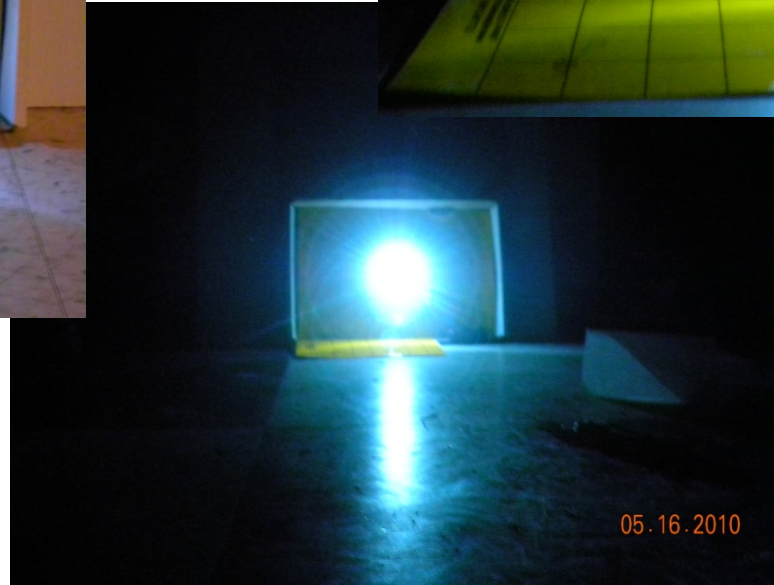

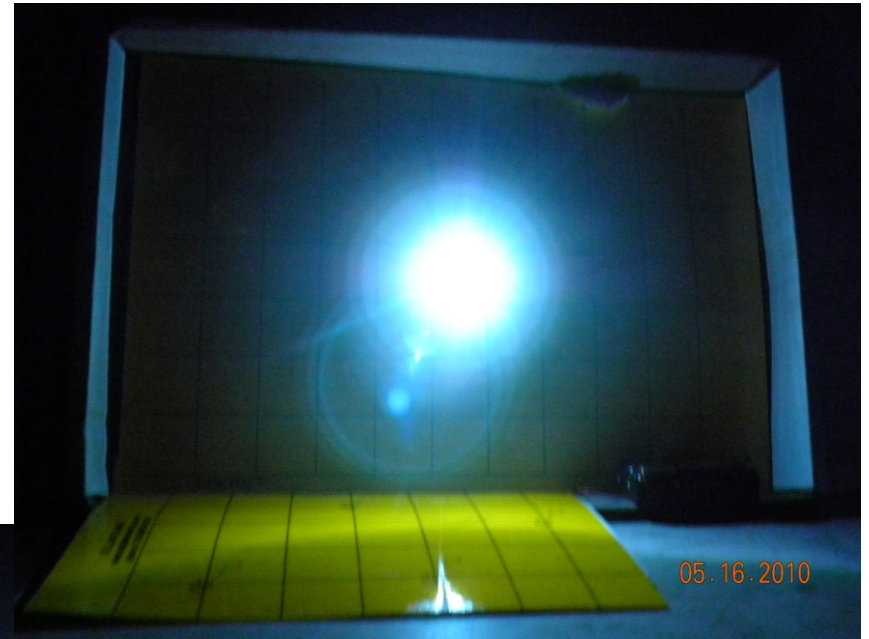

For crawling insects take extra liner (included), crease 1" to 90° angle on the side, remove protective paper on both sides and place on trap as shown on picture.

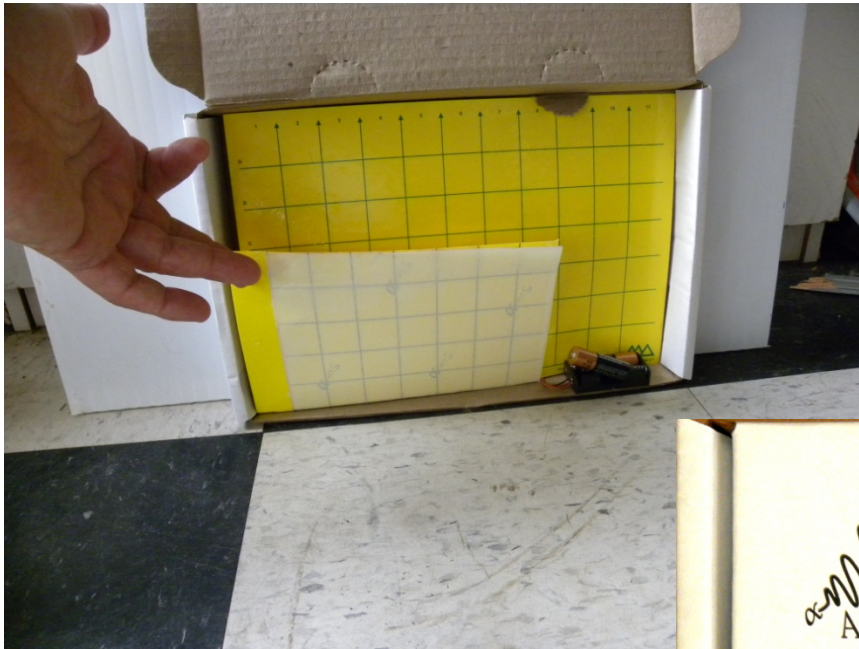

Adhere bottom of “walking platform” to the container floor.

Close the container door. Trap is activated and ready to use.

After transit when someone opens the container, he or she should fold in “walking platform”, close the trap, remove from the door and ship it to the address on the box for identification of captured insects.

The back of a cardboard box with shipping labels and logos. The box is white with black and yellow text and graphics. The logos for AlphaScents and TRANSTRAP are visible. There are several labels for shipping information, including a postage label and a return address label.
